1 Introduction

1.1 Background

By default, Magento 1.x password requirements are weak and susceptible to brute-force attacks. There are many ways to mitigate the problem, such as increasing the minimum password length, but even then, this does not eliminate the possibility of a successful brute-force attack, it only slows it down a bit.

1.2 Description

Tokenize User Authentication provides passwordless authentication for administrators and customers alike. Through single-use, tokenized hyperlinks sent via email, a user is able to authenticate quicker, and without the need for username and password input, eliminating the brute-force attack vector.

2 Configuration

2.1 Fields

2.1.1 General Settings

Enable Tokenize User Authentication: Enable the extension. By default, it is disabled.

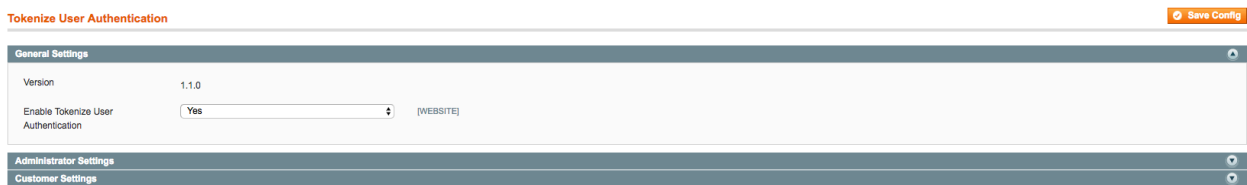

Figure 1: General Settings

2.1.2 Administrator Settings

Login Request Email Sender: The **From** email address for admin login requests.

Login Request Email Template: The email template used for admin login requests. You can customize this template, or add a new one.

Login Request Link Expiration Period: The amount of minutes until the admin login request link expires and is no longer usable. Defaults to 10 minutes.

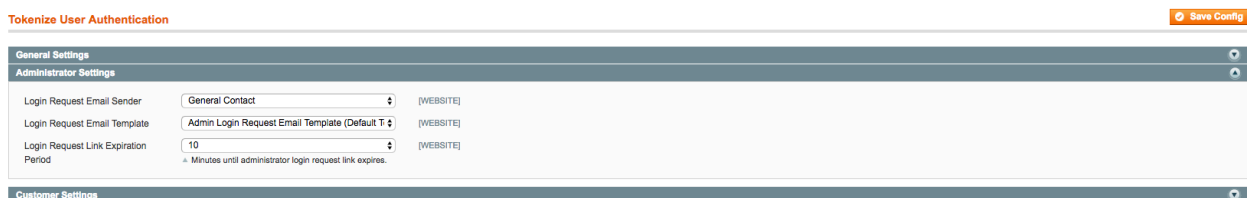

Figure 2: Administrator Settings

2.1.3 Customer Settings

- Login Request Email Sender:* The **From** email address for customer login requests.
- Login Request Email Template:* The email template used for customer login requests.
- Login Request Link Expiration Period:* The amount of minutes until the customer login request link expires and is no longer usable. Defaults to **30 minutes**.
- Account Registration Email Sender:* The **From** email address for customer account registration emails.
- Account Registration Email Template:* The email template used for customer account registration emails.
- Account Confirmed Email Sender:* The **From** email address for customer account confirmation notice emails. This is only applicable when customer email verification is enabled.
- Account Confirmed Email Template:* The email template used for customer account confirmation emails.
- Confirm Account Email Sender:* The **From** email address for customer confirmation required emails. This is only applicable when customer email verification is enabled.
- Confirm Account Email Template:* The email template used for customer confirmation required emails.

The screenshot displays the 'Customer Settings' section of the 'Tokenize User Authentication' configuration page. The settings are organized into a table with two columns: the setting name and its value. The values are either dropdown menus or text input fields, each with a '[WEBSITE]' link to the right. A 'Save Config' button is located in the top right corner of the settings area.

Setting	Value	Link
Login Request Email Sender	General Contact	[WEBSITE]
Login Request Email Template	Customer Login Request Email Template (Default)	[WEBSITE]
Login Request Link Expiration Period	30 ▲ Minutes until customer login request link expires.	[WEBSITE]
Account Registration Email Sender	General Contact	[WEBSITE]
Account Registration Email Template	Customer Registration Email Template (Default)	[WEBSITE]
Account Confirmed Email Sender	General Contact	[WEBSITE]
Account Confirmed Email Template	Customer Account Confirmed Email Template (C)	[WEBSITE]
Confirm Account Email Sender	General Contact	[WEBSITE]
Confirm Account Email Template	Customer Confirm Account Email Template (Def)	[WEBSITE]

3 Usage

3.1 Tokenized URLs

For each login request, a 128-character token is generated and associated with the user. The user receives an email containing a one-time magic link, and after authentication, the token is expired. Tokenized URLs can never be used more than once.
